

NEXTGEN

SCAFFOLD SERVICES

**SAFETY & SAVINGS
THROUGH INNOVATION**

Next Generation Scaffold Services Inc. (NextGen) is a full-service specialty scaffold and soft-craft service provider. Our core mission is to address the safety challenges in the scaffold industry with new and innovative products that both reduce risk and time exposed to risk.

Contemporary, modern approaches are inherent in the NextGen makeup. Our leading-edge, patented products improve jobsite safety, while increasing productivity and efficiency, resulting in reduced labor costs.

NextGen's ultimate priority is to provide every customer and employee with the safest products available. NextGen is the pioneer in the scaffold industry with our unbeatable state-of-the-art products.

SOFT-CRAFT SERVICES

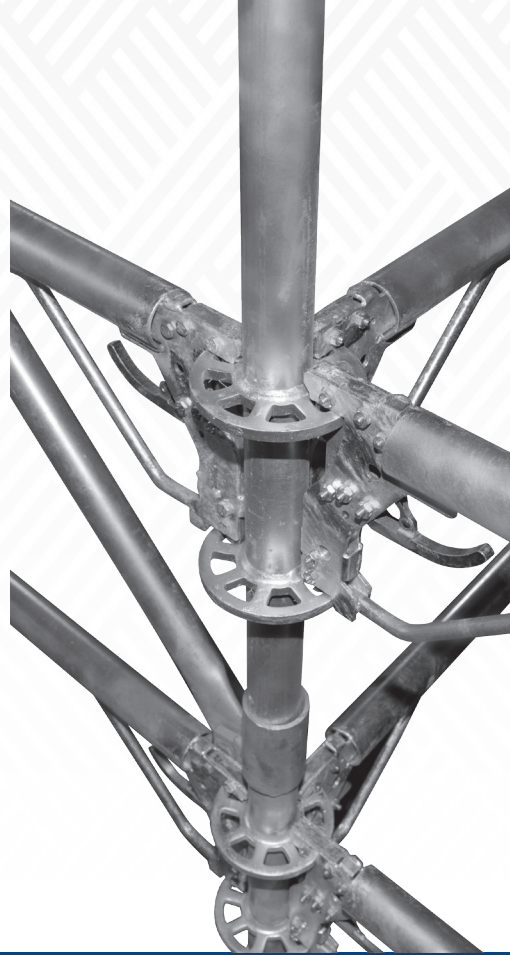

- **Power Generation, Industrial & Commercial Scaffolding Services**
- **Insulation Services**
 - Full service with all types of industrial insulation products
- **Fireproofing**
 - Installation of all types of cementitious and select intumescent fireproofing
- **Painting & Surface Prep**
- **Specialty Scaffold Package Design**
- **Custom Scaffold Fabrication**
- **Multi-Craft Services for Select Customers**
 - Multi-craft services performed with same management team to streamline workflow

NextGen utilizes the patented InstantLock System Scaffold. InstantLock combines the most popular scaffold features within the industry and has engineered those advantages into the most efficient and safe scaffold product to date.

At the core of InstantLock's patented horizontal members is an internal cable assembly connecting the triggers from both end connectors. This unique design, exclusive to InstantLock, provides numerous advantages, such as:

- No tools, cable-assist advantage—One-step full horizontal connection
- Qualified tie-off on all horizontal members and rosettes
- High-capacity side impact loading
- Reshoring capacity with one of the strongest designs in the market
- Advanced toe board feature
- Compatible with Layher style components and accessories
- Compatible with SafeDeck products

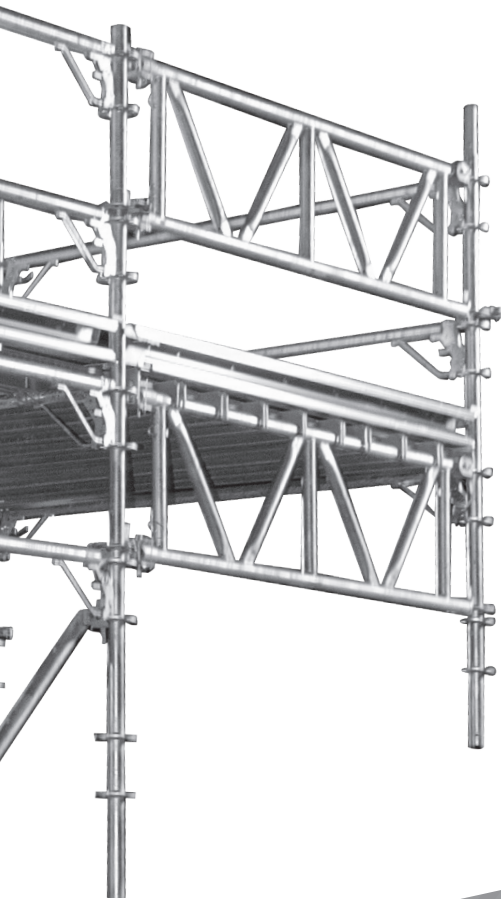

SafeDeck, a patented swing truss system, is the only system on the market that can significantly reduce the hazard to leading edge falls during the erection and dismantle process.

Additional risk prevention features include:

- > Installation of up to 90% of the required structural components from a safe completed work platform.
- > Reduction of labor time to erect and dismantle by up to two-thirds, as compared to products and methods of today's system scaffold.
- > Compatible with ring lock and tube & clamp scaffold systems.
- > First and only patented truss system that swings both horizontally and vertically.
- > Available in both steel and aluminum.
- > Lightweight aluminum trusses reduce deadload constraint factors in suspended applications.
